

Amazing Egg Facts

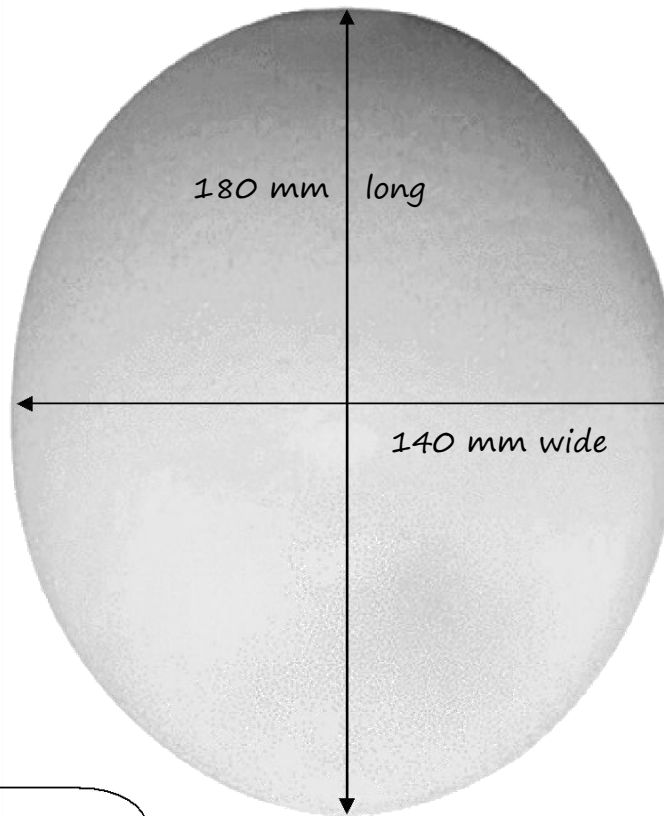

All birds lay eggs and generally, the bigger the bird, the bigger the egg!

Your challenge is to create a display showing how some common British birds' eggs compare to the largest egg in the world... that of the ostrich, and the smallest egg... that of a hummingbird!

Use this information to create some life size eggs.

An ostrich lays the largest egg

Using paper or card, create some life size eggs of these birds. You may need to do some research so you can colour in your egg accurately. Use them to create a display.

A hummingbird lays the smallest egg

13mm long
8mm wide

Can you find out the egg sizes of some of some other British birds to add to your display?

Blackbird egg:

Length - 29mm x 22mm

Great tit egg:

Length - 17mm x 13mm

Blue tit egg:

Length - 15mm x 12mm

Starling egg:

Length - 30mm x 21mm

Robin egg:

Length - 20mm x 15mm

Wren egg:

Length - 16mm x 13mm
